EXPERIENCE

Technical Lead

July 2024 – Present

Portkey.ai (acquired by Palo Alto Networks)

early engineer, joined a team of 4, acquired for \$160 million, scaled services from 0 to 50000 rps (5 Trillion LLM tokens a day), manage and directly oversee a team of 6.

- Architected and scaled core AI gateway infrastructure from 0 to 50,000 RPS, processing more than 5 trillion LLM tokens per day across multi-provider inference workloads
- Served as both a hands-on IC and technical lead, driving architecture decisions, platform direction, and execution across a team of 6 engineers
- Core contributor of multiple OSS repositories including **Portkey AI Gateway** 🌟(12000+ stars)
- Architected and built the Agent Gateway and MCP abstractions that enable enterprises to use agents in production with observability and governance
- Designed and implemented high-performance memory-efficient streaming middleware capable of handling >1000 RPS per thread on machines with as little as 512MB available memory
- Built and owned the OpenTelemetry-based observability and logging infrastructure processing >20 million requests per day with zero dropped logs
- Designed realtime websocket infrastructure for streaming inference providers with integrated event logging, stream aggregation, and provider-agnostic abstractions
- Partnered directly with enterprise customers to architect deployment solutions addressing security, compliance, networking, and infrastructure constraints
- Drove integrations with external AI frameworks and ecosystems including DSPy, LangChain, and Vercel AI SDK

Software Engineer

Oct 2021 – June 2024

RedBlock.ai

moved out after 3 years due to an unsuccessful pivot, lots of fun hands-on learning and experimentation where I got to learn from a closely knit team of experts

- Built an ETL framework to integrate 120+ SaaS apps, this system scaled to safely process 1TB of data everyday
- Overhauled the RBAC(Role Based Access Control) setup on the server and the client, making the application robust and secure
- Handled release and repo management, also automated parts of the CI/CD pipeline using Jenkins and Serverless Scripts
- Developed an Agentic AI framework to automate web actions and data extraction, this is the central offering of the company now

Software Development Intern

Feb 2021 – Oct 2021

Koo App

Bengaluru, KA

joined as an intern when the team was all of 12 people, the company raised \$30 million in funding shortly after and this was one of the most impactful roles I've held

- Worked in a team of two to develop the company's embedding service, a core feature of the platform. The company grew from 30,000 to 8 million+ downloads while I interned there
- Offered a full time role with the company

COOL STUFF

🌟 **map-of-goodreads** | *Python, MapLibre*

- A map of goodreads where you traverse books based on 20 million book shelves for clustering

TECHNICAL SKILLS

Languages: Java, Python, TS/JS, SQL (Postgres), Shell Scripting (Bash and Fish)

Frameworks: Spring, LangChain, GraphQL, React, Node.js, Jupyter, Jenkins, Neo4j, ElasticSearch, ELK, Redis, ALB, ECS, S3, CloudWatch, CloudFormation, DynamoDB, OpenSearch, Spring, Springboot, SQS, Playwright, Kubernetes, Helm Charts, Clickhouse

Tools: AWS, Serverless, Git, Linux, Automation, CI/CD, Graph Databases, nosql Databases, LLMs

Skills: Database Design, System Architecture Design, Internal Tooling, Repo Management, Prompt Engineering, Data Engineering, Data Pipelines, RAG Pipelines

EDUCATION

Indian Institute of Technology, Patna

Bachelor of Technology in Civil Engineering

Patna, BR

July 2017 – May 2021

The Hyderabad Public School

Science with Electronics

Hyderabad, TG

June 2008 – May 2016
